

## **AgriFund: Transforming Agricultural Financing for Farmers**

### **Overview**

AgriFund is a digital platform designed to provide farmers with streamlined access to savings, credit, and loans. The application, currently in the final stages of development, facilitates a centralized financial pool, automates credit score management, and offers a secure interface for attaching securities to improve loan eligibility. With a growing membership of around 30 farmers, AgriFund addresses the inefficiencies of manual financial pooling by providing a simple, accessible solution for decentralized users.

### **1. Decentralized Financial Pooling**

**Challenge:** Farmers pool resources into a joint bank account and Chamas, requiring multiple signatories for access. This creates delays and limited access, especially for members in decentralized locations.

**Solution:** AgriFund centralizes savings, allowing users to deposit funds directly through the app, eliminating manual processes and joint signatory requirements.

### **2. Limited Access to Finance**

**Challenge:** Decentralized locations and joint bank account rules make it difficult for farmers to access their savings and loans promptly.

**Solution:** AgriFund offers a digital platform that provides users with real-time access to their savings and the ability to apply for loans from anywhere.

### **3. Manual Credit Assessment**

**Challenge:** The lack of a structured credit evaluation process makes it difficult to assess users' loan eligibility fairly and transparently.

**Solution:** AgriFund introduces an automated credit score system based on users' savings behavior. Regular savings increase credit scores, allowing for a fair assessment of loan eligibility.

### **4. Loan Access Based on Credit Score**

Challenge: Traditional loan applications are slow and inefficient, with eligibility often unclear.

Solution: Loan applications are processed based on a user's credit score, ensuring faster approval and fair access to funds.

### **5. Securities for Loan Enhancement**

**Challenge:** Farmers may need larger loans but lack the means to secure them.

**Solution:** AgriFund allows users to attach securities, such as land deeds or farming equipment, improving their credit score and loan eligibility.
